

Pere Marquette River-Fishing Report

December 13th 2008

Water Conditions — Normal levels and clear . Temps in mid 30's

Fishing Conditions — Winter is here and the cold temps have made the river extremely clear. There are fair amounts of fish in the fly water below M-37 with clown and grapefruit nuke eggs working best. Below the fly water fishing is hit and miss with some sections of river holding more fish than others. Below Indian bridge shelf ice is making fishing tough, a day or two of warmer temps and it should clear out and be fishable again.
